

RT/duroid® 5880LZ

High Frequency Laminates

RT/duroid® 5880LZ filled PTFE composites are designed for exacting stripline and microstrip circuit applications.

The unique filler results in a low density, lightweight material for high performance weight sensitive applications.

The very low dielectric constant of RT/duroid 5880LZ laminates is uniform from panel to panel and is constant over a wide frequency range. Its low dissipation factor extends the usefulness of RT/duroid 5880LZ laminates to Ku-band and above.

RT/duroid 5880LZ laminates are easily cut, sheared and machined to shape. They are resistant to all solvents and reagents, hot or cold, normally used in etching printed circuits or in plating edges and holes.

When ordering RT/duroid 5880LZ laminates, it is important to specify dielectric thickness, tolerance, electrodeposited copper foil, and weight of copper foil required.

Features:

- Lowest dielectric constant available
- Low Z-axis CTE
- Lightweight / low density
- Uniform electrical properties over a wide frequency range

Some Typical Applications:

- Airborne antenna system
- Lightweight feed networks
- Military radar systems
- Missile guidance systems
- Point-to-point digital radio antennas

Property	Typical Value [1] RT/duroid® 5880LZ	Direction	Units	Condition	Test Method
