

MAGTxREXx™ 555

High Impedance Laminates

MAGTxREX™ 555 laminate is the first commercially available low loss laminate with controlled permeability and permittivity. MAGTxREX 555 materials are constructed from a proprietary, low loss, high resistivity ceramic filler and a high temperature thermoplastic matrix. This yields a system which is conformable, through hole via capable, and mechanically and electrically stable.

MAGTxREX 555 materials offer a miniaturization factor comparable to a material with a dielectric constant of 30, with an intrinsic impedance comparable to a material with dielectric constant of 1. This makes the material ideal for miniaturizing antennas below 500 MHz in operating frequency.

When used as part of an antenna design, MAGTxREX 555 materials offer designers the ability to produce electrically small antennas with bandwidth and efficiencies not previously possible.

MAGTxREX 555 materials are available with copper, for use as a laminate material, or without copper for use as a loading element for cavity backed antennas.

When ordering MAGTxREX 555 materials, it is important to specify laminate thickness and whether copper is required, and if so, the copper thickness.

Data Sheet

FEATURES AND BENEFITS:

Matched permeability and permittivity with high miniaturization factor $\sqrt{\epsilon_r \mu_r}$

- Substrate impedance matched to air
- Antenna miniaturization with improved bandwidth

High temperature thermoplastic composite laminate with low moisture absorption

- Environmentally stable electrical performance
- Flexible and mechanically robust

Low dielectric and magnetic loss below 500 MHz

- High antenna efficiency

TYPICAL APPLICATIONS:

- Low profile VHF/UHF antennas
- Electrically small VHF / UHF antennas
- VHF magnetic components (eg. Inductor, Transformer)

MAGTREX 555 Property	Typical Value ⁽¹⁾	Direction X=CMD Y=MD	Units	Condition	Test Method
Electric & Magnetic Properties					
Dielectric Constant, (ϵ_r)	6.5	X/Y	-	400 MHz	Coaxial Airline 1" NRW Extraction
Dielectric Constant, (ϵ_r)	5.3	Z	-	400 MHz	FSR, IPC-TM-650, 2.5.5.6
Permeability (μ_r)	6.0	X/Y	-	400 MHz	Coaxial Airline 1" NRW Extraction
