

# SpeedWave™ 300P Prepreg

SpeedWave™ 300P low-Dk glass reinforced ultra-low loss resin system prepreg can be used to bond a variety of Rogers laminates including XtremeSpeed™ RO1200™, CLTE-MW™, and RO4000® series. SpeedWave prepreg is offered in multiple spread and open weave glass style and resin content combinations to allow for a wide range of options for the circuit designer.

SpeedWave 300P prepregs exhibit excellent fill and flow capability around heavy copper features, a low z-axis expansion for plated through hole reliability, and are CAF resistant. SpeedWave is also compatible with FR-4 fabrication processes.

The SpeedWave prepreg system offers a low dielectric constant of 3.0 – 3.3 and a low dissipation factor of 0.0019 – 0.0022 at 10GHz

with stable performance over a broad frequency range. These materials also offer excellent thermal reliability for demanding high layer count designs requiring multiple sequential laminations.

SpeedWave 300P prepreg is UL-94 V-0 rated and compatible with lead-free processing.

## /// Features and Benefits:

High performance ultra-low loss prepreg system compatible with a variety of Rogers' High Frequency and High Speed Laminates

- Excellent fill and flow
- Low Dk glass with spread and open weave offerings
- CAF resistant
- Compatible with FR-4 processes

Ideal for high layer count designs

Capable of multiple sequential laminations

Lead-free process compatible

## /// Typical Applications:

- 5G mmWave
- High resolution 77 GHz automotive radar
- Aerospace & Defense
- IP infrastructure (Backplane, Line card)
- Optical transceiver
- High performance computing
- Automated test equipment (ATE)
