

October 2023

Dear Valued Customer,

To the best of the knowledge of Rogers Corporation, BISCO® silicone material products are produced without any intentional use and/or addition of PFOA (perfluorooctanoic acid) or PFOS (perfluorooctanesulfonic acid).

In addition, based on the content of the Safety Data Sheets (SDSs) of the raw materials used to manufacture these products, BISCO silicone materials do not contain any of the CAS Numbers of substances noted on the June 14th, 2023 REACH list of Substances of Very High Concern (SVHC), including fluorinated and per-fluorinated chemicals.

Rogers Corporation understands this is a dynamic environment and will continue to monitor and issue guidance on published regulations as they become adopted or changed.

If you have any questions or require additional information, please contact your Rogers Sales Engineer.

Sincerely,

Rogers Corporation
